OpenAI, LangChain, opencode, Claude

Agent Orchestration, AI Automation

High Level Communicator, Creative, Innovative, Determined, Tireless

Calculus 3, Philosophy

Judo, Brazilian Jiu-jitsu

Profile

In 2020 I created a best-selling Udemy course on React and MUI development which has now taught over 20,000 students in 145 countries. Since then I have worked with companies ranging from cyber security defense contractors and multi-billion dollar commercial real estate brokers to federal government agencies and software consultancies. In January 2026 I joined Flint, an edtech startup, as a Product Engineer building a next generation AI-powered LMS/SIS platform partnered with hundreds of schools across the world to automate tasks for teachers and deliver personalized learning to individual students. Learning will always be at the heart of what I do - from teaching myself to code as a kid, to teaching people all over the world about coding, and now building tools that will redefine education for students everywhere.
